

RUCHA GADE

Java Backend Developer | Spring Boot | AWS Cloud

ruchagade20@gmail.com | [linkedin.com/in/rucha-gade](https://www.linkedin.com/in/rucha-gade) | github.com/Rucha-1111 | 9604101210 | Pune, India

PROFESSIONAL SUMMARY

B.Tech Computer Science graduate (June 2026, CGPA 8.4/10) with hands-on experience designing and deploying Java backend systems and cloud-based applications using Spring Boot, AWS, REST APIs, and MySQL. Built and deployed 3 full-stack REST APIs with Docker, including a serverless AWS Lambda pipeline processing 500+ documents. Strong foundation in OOP, data structures, and DBMS, seeking a Software Development Engineer role in Java backend development.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: Spring Boot, JDBC, REST APIs, Jackson

Databases: MySQL, MongoDB

Cloud & DevOps: AWS Lambda, Amazon S3, Amazon API Gateway, AWS IAM, Docker, Render, Git, GitHub

Tools: Maven, Postman, IntelliJ IDEA

PROJECTS

Sortify — Serverless Document Management System [\[Link\]](#)

Tech Stack: AWS Lambda, Amazon S3, Amazon API Gateway, AWS IAM, Python, ReactJS

- Designed and implemented a serverless backend using AWS Lambda to automate document processing and workflow execution, eliminating the need for a managed server.
- Integrated Amazon API Gateway with Lambda functions to expose secure REST endpoints connecting frontend and backend.
- Configured Amazon S3 buckets for secure, event-driven storage and processing of 500+ test documents.
- Implemented least-privilege AWS IAM users, roles, and policies to secure access across cloud resources.
- Collaborated with a development team to integrate cloud services into the application, delivering a scalable, serverless document management solution.

Expecto-Offerum — Interview Application Tracker [\[Link\]](#)

Tech Stack: Java, Spring Boot, REST API, Maven, Docker, JavaScript, HTML/CSS

- Built a full-stack Spring Boot REST API to track job applications across Applied, Interviewing, Offer, and Rejected stages.
- Implemented CRUD REST endpoints (GET/POST/PATCH/DELETE) with `@RestController`, backed by a thread-safe `CopyOnWriteArrayList` and atomic ID generation for concurrent access.
- Engineered a zero-database persistence layer using Jackson ObjectMapper to auto-serialize and reload data from a local JSON file on startup.
- Built a responsive vanilla JavaScript/HTML/CSS frontend to dynamically render and update application data via the REST API.
- Containerized the application with Docker and deployed it on Render for zero-config, database-free hosting.

The Chamber of Chapters — Personal Book Tracker [\[Link\]](#)

Tech Stack: Java, Spring Boot, REST API, Maven, Docker, JavaScript, HTML/CSS

- Architected a Spring Boot REST API to manage a personal reading list across To Read, Reading, and Finished statuses with 1–5 star ratings.
- Designed a file-based JSON persistence system with Jackson, removing the need for external database infrastructure.
- Built an interactive JavaScript/HTML/CSS frontend for real-time add, update, and rating actions through the REST API.
- Packaged and deployed the application with Docker on Render for lightweight, database-free hosting.

EDUCATION

Vishwakarma University — B.Tech, Computer Engineering

2022 – 2026 | CGPA: 8.4 / 10.0
