

RUCHA GADE

Java Backend Developer | Spring Boot | AWS Cloud

ruchagade20@gmail.com | [linkedin.com/in/rucha-gade](https://www.linkedin.com/in/rucha-gade) | github.com/Rucha-1111 | Pune, India

PROFESSIONAL SUMMARY

B.Tech Computer Science graduate with hands-on experience designing and deploying Java backend systems and cloud-based applications using Spring Boot, AWS, REST APIs, and MySQL. Built and deployed 3 full-stack REST APIs with Docker, including a serverless AWS Lambda pipeline processing 500+ documents. Strong foundation in OOP, data structures, and DBMS, seeking a Software Development Engineer role in Java backend development.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: Spring Boot, JDBC, REST APIs, Jackson

Databases: MySQL, MongoDB

Cloud & DevOps: AWS Lambda, Amazon S3, Amazon API Gateway, AWS IAM, Docker, Render, Git, GitHub

Tools: Maven, Postman, IntelliJ IDEA

PROJECTS

Sortify – Serverless Document Management System [\[Link\]](#)

Tech Stack: AWS Lambda, Amazon S3, Amazon API Gateway, AWS IAM, Python, ReactJS

- Designed and implemented a **serverless backend using AWS Lambda** to automate document processing and workflow execution, eliminating the need for a managed server.
- Integrated **Amazon API Gateway with Lambda** functions to expose secure **REST endpoints** connecting frontend and backend.
- Configured **Amazon S3 buckets** for secure, event-driven storage and processing of **500+ test documents**.
- Implemented **least-privilege AWS IAM** users, roles, and policies to secure access across cloud resources.
- Collaborated with a development team to integrate **AWS cloud services** into the application, delivering a **scalable, serverless document management solution**.

Task Forge – Team Task Management System [\[Link\]](#)

Tech Stack: Java, Spring Boot, Spring Data JPA, PostgreSQL, HTML, CSS, JavaScript, Docker

- Developed a full-stack team task management application with a RESTful Spring Boot backend and responsive Kanban-style frontend.
- Implemented role-based workflows for **Team Leaders and Team Members**, including task creation, assignment, status updates, editing, and deletion.
- Built REST APIs for authentication, team-member management, and complete task CRUD operations using Spring Data JPA and PostgreSQL.
- Implemented **BCrypt password hashing**, server-side role validation, safe user serialization, and frontend XSS protection for improved application security.
- Containerized the application using a **multi-stage Docker build** and deployed it on Render with PostgreSQL database integration.

The Chamber of Chapters – Personal Book Tracker [\[Link\]](#)

Tech Stack: Java, Spring Boot, REST API, Maven, PostgreSQL, Docker, JavaScript, HTML/CSS

- Developed a full-stack personal book tracking application with a Spring Boot REST API and themed static frontend.
- Implemented user authentication with **BCrypt password hashing** and persistent user-specific book data using PostgreSQL.
- Built a three-shelf reading system to organize books by **To Read, Currently Reading, and Finished** status.
- Added interactive book management features including **ratings, personal notes, status updates, and CRUD operations** through REST APIs.
- Containerized and deployed the application using **Docker and Supabase PostgreSQL**, with responsive, library-inspired frontend UI.

EDUCATION

Vishwakarma University — B.Tech, Computer Engineering

2022 – 2026 | CGPA: 8.4 / 10.0
